ReferenceError in client.js:
socket.on('join', function (data)
{ console.log(data); });

ReferenceError: socket is not
defined Here is the relevant

code in client.js var io =
require('socket.io')();
io.on('join', function (data) {
console.log(data); }); var server
= require('http').createServer(a
pp); server.listen(4000); var io
= require('socket.io')(server);

A: You're right on the first

thing, if you're using `app.listen(number)`, then the instance of `app` that was created is not accessible. You have to find the instance of `app` and create your socket within it.

```
var app = require('http').createServer(app);
app.listen(4000);
var io = require('socket.io')(app);
io.on('join', function (data) {
  console.log(data);
});
```

The odd-even rule for automobile use in Delhi is changing again The

odd-even rule will come into force tomorrow and will stay in force until it is withdrawn. The

odd-even rule will come into force tomorrow and will stay in force until it is withdrawn. In

view of the continuing controversy over the odd-even rule, the Delhi government has

decided to delay its implementation. But the new move has also caused confusion as to how it is going to be

implemented. Under the new plan, odd-even rule will come into effect starting May 4 and will be effective till May 9. People will have to comply with the odd-even rule, which means that they cannot buy an odd-numbered vehicle or a vehicle with a registration plate ending with a '2', a '3', '4', '5', '6' or a '7', and can only buy an even-numbered vehicle with a registration plate ending with a
