References Category:Windows security softwareGenetic models of obesity.
Over the last 15 years, several mouse models of obesity have been
described, each with a distinctive biochemical and physiologic phenotype.
The extreme examples of obesity caused by mutation in genes controlling
food intake, such as the ob, agouti, and leptin genes, are characterized by
hyperphagia, hyperinsulinemia, and markedly elevated circulating leptin
levels. In contrast, mice mutant for two other obesity-causing genes, the
tubby and fat-1 genes, are hypophagic and hypoleptinemic. They differ
from the ob and agouti mutants, however, in that the Tubby and Fat-1 mice
are prone to morbid obesity even at a relatively young age. Thus, mice
mutant for two different obesity-causing genes can give rise to strikingly
similar phenotypes, suggesting that certain combinations of genes, when
expressed in the mouse, may underlie a variety of human obesity
syndromes.The City Council has approved a resolution, sponsored by
council members Nader, Farrell and McCauley, demanding the federal
government clarify its relationship to the marijuana industry. Nader said the
city needs to know if it can use its municipal corporation to regulate and tax
the marijuana industry, or if it needs to follow federal policy. Nader said the
city must know by the end of June. “We are in the position right now that
we can’t regulate it,” he said. “We are just basically telling them if you want

to control it in our area, that's your choice." McCauley, who said he has personally smoked marijuana, took issue with the federal definition of marijuana as a Schedule I controlled substance — meaning it has no accepted medical use. McCauley said medical uses, including for treatment of PTSD and depression, are accepted in other countries. McCauley said the council should not get involved in regulating marijuana, but said it should consider city resources to be available to help the state if it chooses to regulate. "If the state of Rhode Island or the federal government tells us that we cannot regulate that industry in our city, we have resources to address those issues," he said. "We are asking the federal government to clarify their definition so we can work on that, and we can't do it on our own." Council President John N 2d92ce491b
