by Q Ding 2019 Cited by 8 Scanning electron microscopy (SEM) image (left) and the overlay of the X-ray diffraction (XRD) (right). by S Guo 2022 Comparing with anisotropy, roughness and roughness curvature, the proposed methods were proved to be better than anisotropy in most cases, as shown in the numerical examples of anisotropy, roughness, roughness curvature and composite roughness . by C Li 2018 Cited by 6 In the proposed method, the RF field is modeled as a Gaussian beam in the far field and the crack is modeled as a series of cylindrical circular slots . by Z Guo 2022 Based on the technique of cutting and

folding, the 3D cylindrical shape cracks are solved . by Y Chen 2022 From the perspective of fracture mechanics, the frequency distribution of the energy dissipated during the crack propagation is first derived, and the average energy dissipated per unit length is then obtained by dividing this frequency distribution with respect to the frequency . by X He 2020 Cited by 6 The proposed algorithm aims to extract the information of discontinuous surface structures from X-ray scatterograms, which is more efficient than the conventional algorithms . by J Wang 2019 Cited by 6 The height of the steel tube is 1.6 m, and the length of the crack is 40 cm. by Z Guo 2022 The energy dissipated by the crack over the propagation time is $7.39 \times 1022J$. by Y Chen 2020 Cited by 6 The algorithm consists of three main phases: edge detection, ray-bundle splitting, and crack classification. by J Wang 2022 The energy absorbed by the crack over the propagation time is $9.56 \times 1022J$. by Z Guo 2022 The yield surface can be delineated as a series of . by Y Chen 2020 Cited by 4 In this paper, we propose a method of constructing the energy distribution map and its application for automatic microcrack detection in the fatigue life prediction of a metal component . by S Wang 2020 Cited by 4 In the present study, the fatigue crack
