Anatomy and physiology of the collateral circulation to the liver. The blood supply to the liver via the portal venous system is sometimes inadequate, particularly during major hepatic resections and in patients with cirrhosis or portal hypertension. Hepatic arterialization, hepatic vein ligation, and extended hepatic resections, which are currently used to increase the blood supply to the liver, may be limited by blood loss and ischemic liver injury. This article will summarize the basic anatomy and physiology of the hepatic collateral circulation, with emphasis on factors that may limit the flow of blood to the liver and that may have therapeutic implications. Q: How to create a start screen in android I have created a game where user has to select one of the randomly generated questions. Each question has its own text. It will have a start button next to it. I created a layout for the screen and defined it as a tag. Now I have to load a screen into the layout. I am not sure what to do now. Here is my Layout file:
