Bitumen Bitumen is a soft, greyish-black, tar-like substance, somewhat similar to asphalt, that is found in abundance in Canada, the United States, and other North American countries. Because of its

abundance, it is used extensively in road building, roofing, waterproofing, roof-tiles and adhesives. Because of its physical properties, it was formerly used in flooring and as a binder for other mixtures. The material has been used in this country since the early 1800's. It is largely the result of the extensive mining of the oil sands in northern Alberta and the use of superheated steam to crack the oil from the sand. For over 100 years the crude oil had been stored in large structures called "tank farms". In order to keep the oil from going bad, it was heated above 500°C. This process has been discontinued, leaving a large volume of aging crude oil, known as "tailings". The tank farm operators found that by

mixing the crude with the tailings, they could convert the tailings into oil at a temperature in the range of 50-90°C. The new oil was then shipped to refineries, or the
