Unmount all the drives your disks are located on by pressing the "Unmount Volume" button. Pairing will no longer be allowed. Re-execute the step when prompted to "Start Full-Drive Scan". Choose the correct partition of your disk, which contains your data. Keep in mind that the UFS Explorer Advanced Recovery Features allows you to save the image of your partition, so you will be able to mount it later. Select the partitions on which you want to scan data. You can choose to scan the entire disk, only one partition, or none. Select the correct disk drive or partition that contains the data that you want to recover. Click the "Start Scan" button. The scan is done automatically after a few seconds. You will see the message "The full-scan was successful" when the scanning is done. If you did not make any changes to your operating system and have not changed any data on your computer after the scan, the scanning results will be displayed. Press "No" when asked by the program to continue scanning. Press "Done" when you have finished with the scanning. You can now remove the disk volume and the partition is available to be used on any application. The method and program includes all the actions needed to perform disk recovery.
