What's New in the?

----- The ASIO Output plugin provides a simple and powerful way to output your ASIO soundcard via the Winamp media player. The plugin itself comes with a fully featured Winamp skin, which automatically configures itself upon plugin installation, and adds an ASIO output device to the Winamp media player interface. Unlike the Winamp ASIO Input plugin, the Winamp ASIO Output plugin doesn't try to emulate an ASIO card on your system, it allows you to use any native ASIO soundcard (via USB, FireWire, or PCI sound card interface). You can thus be sure that you are using the native ASIO card. Note that the ASIO driver supplied with Windows doesn't necessarily have all the features of a native ASIO card. If you want more features like hardware mixing (input from the host computer) and advanced buffering, a hardware ASIO card is definitely the way to go. ----- Installation: ----- Unzip the winamp-asio-plugin-installer.zip file, and place the winamp-asio-plugin.dll file in the plugins directory. If you are already running winamp 2.91 or later, you can simply add the plugin to the Plugins Manager. ----- Usage: -----

For more information, please read the winamp-asio-plugin-usage.txt file included in the plugin. (If you want more functionality, like hardware mixing, you should look at the "Windows ASIO Host Driver" sample application included in the plugin, which is part of the ASIO driver from ASIO4ALL.) ----- Usage on Windows Vista/7:

----- If you want to have the Winamp ASIO output plugin working on Windows Vista or Windows 7, you should follow these simple steps: 1) Install the ASIO driver included in the winamp-asio-plugin-installer.zip file. It is most likely in your Sound and Audio Devices folder. If it is not there, you can find it in your Windows Device Manager. 2) Start the Media Player from Start -> Search, and type "asio". You should see the ASIO output device. ----- Usage on Mac OS X 10.5 or higher: ----- To enable the ASIO output plugin on Mac OS X, you should simply drag the winamp-asio-plugin.dll file in the Finder. It will be copied in the Applications/PlugIns folder. and the sum of the data required for the signatures of the receiving party (the blockchain oracle) is related to the value of the transaction.
