MKV2AC3 is a lightweight and multi-language application designed to help you easily convert

MKV files into AC3 audio. The converter is easy to use, as it offers you a tab-based interface that makes it suitable for both advanced and beginner users. First, you have to add the MKV files you want to convert. The program supports batch conversion, thus allowing you to process more than one file at once. The video files you select are placed in a list, enabling you to view the detailed video and audio information for each one of them. For example, you can find out each files' codec type, framerate, length

and resolution, as well as the audio type, bitrate and delay. Before starting the conversion process, the application requires you to set some general options, such as the destination directory or the CPU type. Also, you are able to optionally choose to keep the original stream and temporaries. Moreover, you can easily choose other options for the output file. Some of them are the audio bitrate and the volume. The program offers you two conversion methods: 'aften' and 'eac3to'. In

case you choose the second one, you have to set the path to the EAC3TO executable file. After doing all this, you simply have to press the 'Start' button and the application does the rest in no time. The program includes a 'Log' tab, where you have the possibility to monitor the conversion process for each file.

As an example, the search engine Google has made it possible for users to search for information on the Internet, a process made much easier by the fact that it can read your queries. That's where people are drawing a line. What Google has done is make it possible for people to ask questions and get answers within

seconds. In a lot of cases, it's not just one search. In fact, it's likely that a user might have multiple questions. We're not necessarily talking about a lifetime of questions. Some people may be looking for information
