Adjusting photos for the web  
The most important tool for webmaster photographers is the Adjustment Layer. If you want your photos to look good on the web — and believe me, it's a huge topic — you need to know how to use this layer. An Adjustment Layer is one of the main tools for webmaster

---

photography. (If you're new to Photoshop, read about the Layers panel on the next page and how to use it.) If you're working on a site that has a massive array of images to edit, you may want to divide your work into smaller tasks. I recommend dividing your images into smaller groups using the following steps:

Adobe Photoshop Creative Cloud features advanced editing and retouching options and a simpler interface with "smart guides" that auto-adjust based on photos. It's also more affordable than the original version. PSD File Interchange  
PSD stands for Photoshop Document. It's a file format used by Photoshop and Photoshop Elements. This free

---

online tool allows you to upload a PSD file, edit the image in this open-source program and download the new file. If you wish to convert a PSD file to another format, this tool is also free. Photoshop Image Formats There are many different types of Photoshop image formats, and you must find a way to import or export the image correctly. An image

---

can be exported in many different image formats, including PSD, PDF, JPEG, GIF, TIFF, and PNG. How to Convert PSD to JPG Image Resize Most photo editing programs provide the standard resizing of images. This option is found in the Edit menu. This is the only way to resize an image in Photoshop, and it is the most common method.

---

There are multiple options available and the process is quite simple. Image Adjustment Image adjustments refers to any changes made to the clarity and contrast of an image. There are several different ways to apply these changes, such as the Lightroom or Photoshop effects. Another option for editing an image is the brightness, contrast, or

---

saturation. These options are found in the Edit menu.

## Choosing a File Type Image

Formats As a photographer or graphic designer, you may be working with a variety of different image formats. Every major photo editing and web design program has a different format selection. Read this to find out which is right for you.

**PNG** PNG stands for Portable

---

Network Graphics. It is an open-source file format and is supported by most major image editing software programs. This format is not the best choice for editing a personal website, but it is perfect for professional web design. It contains the same properties as JPG, including transparency, but with an added feature. JPEG JPEG

---

stands for Joint Photographic Experts Group, but the acronym is actually Jiffy JPEG. This is a lossy format, which means that information is removed in order to reduce file size. It's often used as a default choice for web designers because it is

Friday, 15 February 2011 I have to tell you I have an obsession with flowers. Oh yes, I'm not the only one. There are plenty of people who have quite an interest in the subject. The only difference is that I haven't the slightest idea how to create such wonderful sculptures. I'll leave you with a

---

bit of my pictures. So, let's see what we have to offer... This one is soooo pretty. Its a chilipig. It has very long arms and legs and I love how the little head peeps out. Here is a picture of me holding a chilipig. This one is also really cute. These are also called dragonlilies and the centers of these flowers are usually pink. I love this one and I don't know

---

if its because I've just returned from my trip to the UK or because I have so many business trip lined up that I almost got stuck in traffic while taking this picture. But here we have some very cute owls. This one is one of the things that first got me into crafting and all the other crafts. The creator of this picture use to say that she took the picture

---

with the last remaining bullet she had in the magazine.

Friday, 1 February 2011 I've been planning to do some things for a while and finally I did one last week. In my previous post I asked what I wanted to do for Valentine's day. The answer was: flowers. I thought this little guy would be the perfect Valentine's present. Now its ready for me to give it

---

to my girl. I hope it will be a memorable one and I'm excited to see how she likes it. Until then, enjoy the pictures. This is the back view of this little guy. It would have to be a cheesy-kissy-kissy poo because it is meant to fall on a girl's head. This is how it looks on its side. It will be attached to a plastic stick with strong glue. Here is the man himself. He was so

---

delicate to make, but he is a really strong guy as you will see in the next picture. This will be the stick on which he will sit. I hope he will be able to withstand the strong glue. Articulation rules Articulation rules are linguistic rules that determine the way in which two or more languages can be combined into a single language. They may be related to the rules governing the way in which vocabulary, or lexis, is combined in different languages, as contrasted with grammar, which is concerned with the way in which

---

sentences are put together. The term articulation is used in the field of sociolinguistics as well as in linguistics, sometimes to indicate phonological features of a language, and sometimes to refer to any rules or restrictions of the system which determine how language is structured. A language with the same set of rules as English, for example, may be

---

different from English with respect to its lexis, but it is nevertheless still a member of English. In contrast, a set of rules that specify a new language that is not derived from existing languages, such as the Esperanto language or sign language, is known as a grammar or syntax. The distinction between rules that govern different language

---

combinations and rules that govern the way in which languages are constructed can be illustrated by considering the following phonological transformations: Exceptions to these rules are usually not accommodated in a single language. For example, the graphemes /th/ and /dh/ may be combined in the English word the, so that the perceived stress

---

of the word is at the end of the word rather than in the middle; likewise, the distribution of the graphemes /r/ and /l/ is determined by the spoken language (it would be ungrammatical in English to say an "r-r-r-l-l-l-r" sequence; it is, however, possible in French). Even though most combinations of two or more languages are governed by a set

---

of rules, a language may also have rules that determine the way in which words are placed in a sentence. An example of this is the grammar of French, in which unlike English, the object of a transitive verb must precede the verb, and the subject of a transitive verb must also precede the verb. If in English the object precedes the verb, as in The bus is late,

---

it is rendered as English would say, "the bus is late." However, in French, this is ungrammatical, as the subject precedes the verb. In French, the object of a transitive verb precedes the verb, and the subject of a transitive verb must precede
