I've been trying to find an answer to this and haven't had any luck. I'm trying to insert several rows into a table that has a VARCHAR2 column that cannot be null. This code has been working fine when inserting multiple rows into a single column but now that I need to insert a variable number of rows based on a variable number of parameters, the query throws an error when I try to insert into multiple columns. I'm trying to avoid using a cursor if possible. CREATE TABLE #tmpTest (id VARCHAR2(10) NOT NULL, columns VARCHAR2(100), val VARCHAR2(100).
