Download Site nTopology Element nTopVIP v1.24.0 Crack DownloadQ: Pandas - compare row with another one in different dataframe I have the following two data frames: df1 = pd.DataFrame({'subject': ['a','b','c'], 'operation':['+', '\*', '-'], 'value':[1,2,3]}) df2 = pd.DataFrame({'subject': ['a','b','c'], 'operand':['+', '\*', '-'], 'value':[0,1,2]}) I want to compare row ['subject', 'operation'] from df1 with row ['subject', 'operation'] from df2 and get the output as shown in below table and how many rows from df1 has exact same value in the same column as those in df2? thanks in advance A: Consider this dataframe: subject operation value 0 a + 1 1 b \* 2 2 c - 3 If you look at df2 you can see that it has a subject value that matches b in df1. If you return True from your 'same value' comparison you get: In [7]: df1[(df1['subject'] == df2['subject']) & (df1['operation'] == df2['operation'])].sum() Out[7]: 1 You can also get the same result like this In [9]: df1[(df1['subject'] == df2['subject']) & (df1['operation'] == df2['operation'])].sum() Out[9]: 1 Or combine them: In [10]: (df1[(df1['subject'] == df2['subject']) & (df1['operation'] == df2['operation'])].sum() > 0). 570a42141b
