## RSSRadio

RSSRadio is a lightweight Windows application built specifically for helping users play their favorite radio podcasts directly from their screen, and download them. It sports a clean and intuitive layout that offers quick access to a set of well-organized functions. Plus, it features a built-in wizard designed to help you add a subscription by entering a valid URL, importing data from OPML file format, performing search operations and choosing from a list with podcasts, or see the top podcasts. RSSRadio gives you the possibility to grab the shows automatically or listen to them without downloading the podcasts, play or pause the current selection, go to the previous or next podcast, as well as adjust the volume. What's more, you can sort the podcasts by downloaded or unread files, most recent items, audio or video files, or other criteria, download the new shows from the selected subscription, mark all shows as read, as well as remove or update subscriptions. Other important features worth mentioning are represented by the possibility to perform search operations, upload data from OPML, RSS, or XML file, open the target location for the select podcast, sort subscriptions in an alphabetical order, as well as export data to XML or OPML file format. During our testing we have noticed that RSSRadio carries out the downloading operation very quickly, provides good output results, and no errors showed up throughout the entire process. It is quite friendly with system resources, so the overall performance of the computer is not hampered. As a conclusion, RSSRadio seems to be the right choice in case you are looking for a simple-to-use radio podcast player that is suitable for all types of users, regardless of their experience level.

**Websocket Server** When a user begins downloading a podcast, the currently playing one in his/her library will be removed automatically and a new one will be loaded. This is called "soft refresh".

**How to use Install and run the Websocket Server** You don't have to install any other software. We have done all the job for you, just make sure you have Java SDK 8 installed. Just unzip the jar file and put the file to your system's lib folder. Launch the Websocket Server Once the WebSocket Server is installed, launch it. You may need to give it some time to load. Listen to the RSS Feed When the Websocket Server is up and running, you can navigate to localhost:80

## What's New In?

RSSRadio is a lightweight Windows application built specifically for helping users play their favorite radio podcasts directly from their screen, and download them.
