Photo: Yle/Jussi Nukari The Finnish Parliament on Thursday night voted to extend the country's involvement in the European Union's military mission in Iraq. The vote followed a report by the country's Security Intelligence Service that found that the Islamic State has been using the country's vast Finns Defence Forces to recruit and radicalise young men. The opposition Social Democrats had wanted the country to pull out of the mission, saying that an attack on the country's Parliament would have been on Finnish soil. The vote was held in the Parliament's lower chamber on Thursday night after the upper chamber voted to give the government the power

to extend Finland's participation. The government's final vote was 268 in favour of extending the mission, 32 against. The Finnish Parliament's lower chamber (Photo: Yle) The Finnish Parliament's upper chamber will now decide whether to also extend the Finnish participation. Minister of Defence Jussi Niinistö has said that, once the upper chamber decides to extend the mission, Finland will begin preparations to draw up a new mission mandate. During the meeting, the ruling Finns Party leader, Timo Soini, suggested that Finland could create a special force that would take part in anti-Islamic State missions and police missions in countries where Finland has a presence. In March, Finland's Parliament decided to send a Special Forces unit to Iraq to join the NATO-led operation. Four Finnish soldiers have already been in Iraq, where they will operate as part of the spearhead force protecting the nearby multinational oil refinery at Baiji. Finland's a1d647c40b

What's New in the AutoCAD?

Markup Import and Markup Assist is a new set of functionality within the CAD application that allows you to import feedback and markups into your drawings. In addition to using import templates, you can import comments from a text file, a PDF file, or a print out of paper. And unlike comments and ink on paper, the AutoCAD 2023 feedback and comments can be incorporated and viewed at the same time as the drawing itself. Here is a video that shows the process of importing comments from a printout of paper and including these comments into your design: A current problem with the markup import and markup assist functionality of AutoCAD is that the import is very simple. It does not import everything from the source document. And sometimes, the import takes too much time, or may not be possible, such as importing comments that are underneath a diagram. With this new functionality, when you import, the "feedback" that you receive includes both all the information from the source document, as well as a text version of the markup. So you get both the markups and the actual markup in one go. After the import, you are able to open the drawing with the markup still in place, which you can use to work on the drawing, or add changes to it. Once you are finished, you can then save the file, or send it to others. And when you save, you will save the drawing with the markup. Markup Import and Markup Assist uses a new COM object that is named ClassTemplateImport. So you can find information about the new functionality by searching on the ClassTemplateImport COM Object. Text DLP Tools: With AutoCAD 2023, we are introducing a new set of Text DLP tools, which enable you to quickly convert a drawing from a 2D view to a 3D view, as well as to export text from the drawing. Using the new Text DLP tools, you can export text from the drawing and set this text up in a format that you can import into other programs, including Quark or Publisher. You can also quickly convert the drawings from 2D to 3D view. And with this functionality, you can also export the text in the 2D view to a 2D text format, which is then easily imported into other programs. Here is a video that shows the process of converting a 2D drawing to a 3D drawing, as well as exporting text
