AutoCAD is the most commonly used CAD program in the field of engineering and construction. More than 55 million users have licensed AutoCAD, with about 5 million daily active users. As of April 2018, AutoCAD has been used to create more than 10 billion objects in the United States alone. The application has been used in various engineering and construction projects in the U.S. and abroad, including the CN Tower in Toronto, Canada, the Golden Gate Bridge in San Francisco, the Chunnel in the United Kingdom, the Three Gorges Dam in China, and the Sahaleh Vechrial Plant in Iran.[3][4] Overview [edit] The goal of AutoCAD is to build a model of a project that will allow a project engineer to create drawings and assemblies that will be used by other people in the project. AutoCAD provides two-dimensional drawing, 2D and 3D drafting, and other functions. 2D drawing [edit] The 2D drawing area is divided into a workspace and model space. The 2D drawing area is divided into a workspace and model space, which can be adjusted by various panels. The drawing area has two types of layout: Grid: grids are used for measuring and placement. Grids are the same size, and can be overlapped to make space. Grids are used for measuring and placement. Grids are the same size, and can be overlapped to make space. Layout view: the default view, which includes crosshairs, is not available for every object in every drawing. 2D Drafting [edit] AutoCAD allows you to create and edit various 2D objects, such as rectangles, circles, and lines, and to view, modify, and place them into the drawing. The default workspace contains a drawing area that can be moved, resized, split, and split into pages. The model space can be separated from the drawing area, and can be used to create new objects, such as lines, circles, and text. The model space can also contain other objects, such as layers and blocks. The model space, which can contain any number of objects, is used for 2D drafting. The drawing area, which contains the objects that you want to draw on paper or screen, is where you will type commands, modify objects, create new objects, and place them in the model space.
