Multiple products AutoCAD and AutoCAD LT are two different applications. AutoCAD is a desktop application for creating and editing 2D drawings. AutoCAD LT is a desktop application for creating and editing 2D and 3D drawings. Most organizations that use AutoCAD also use AutoCAD LT for some or all of their design work. The user interface and tools are identical between the two products, the differences are in the file formats and capabilities of the products. Interoperability with other applications AutoCAD and AutoCAD LT use the same file format, are compatible with the same file libraries and exchange data with the same third party applications. This lets you use AutoCAD on a Mac, Windows, or Linux computer, or work in AutoCAD using the standard Microsoft Office interface. AutoCAD LT can be installed on Mac and Windows computers as well. AutoCAD has a long-standing partnership with the AutoCAD and AutoCAD LT file libraries and exchange data with applications that support the same file format, such as MicroStation and MicroCAD by Bentley. Bentley's MicroStation and MicroCAD applications use the.cdl extension to store 3D information and exchange data with AutoCAD LT, but do not contain a copy of AutoCAD LT. To access the AutoCAD LT file format, you must download the file format converter, AutoCAD LT Converter. This tool makes it possible to transfer data between AutoCAD LT and the following file libraries: Bentley MicroStation and MicroCAD, DA and HLT, Master Modeling, MicroStation and MicroCAD, and PA and HLT. You can find a more in-depth explanation of the file format converter at the Autodesk web site. Shortcomings of AutoCAD All CAD programs share the same shortcomings, including: Only one computer and one drawing environment There are no multitasking features. If you open a second drawing or write a text message, your drawing environment and work area disappear. If you need to use another application, you must exit your drawing environment. This is in contrast to programs like Microsoft Office, which have multitasking and allow you to work in a separate drawing while you are creating a text message, for example. You cannot easily work in two separate applications at once Most CAD programs do not support multiple windows
